

```

## some other possible insights
create database Bigshop_sales_data;
show tables ;
select * from big_shop_sales;
with data1 as(select product,sum(items) as items
from big_shop_sales
group by product)
select product,items
from data1
where items=(select max(items) from data1);
# More no.of items are sold from Marble dining table product category.
with data1 as(select Region,sum(items) as items
from big_shop_sales
group by Region)
select Region,items
from data1
where items=(select max(items) from data1);
## North East region most no.of items are sold.
with data1 as (select product,(Cost*items) as revenue
from big_shop_sales)
select product,revenue
from data1
where revenue=(select max(revenue) from data1);
## Bamboo Foam Couch product had more revenue.
with data1 as (select Region,(Cost*items) as revenue
from big_shop_sales)
select Region,revenue
from data1
where revenue=(select max(revenue) from data1);
## From North West Region we got more revenue.

```
